Making A Mace

Mike Watson
CSCI 140
The Handle

- Begin with a cylinder 2 feet long with a 1.5 inch radius.
The Handle

- Next, create a new layer and make a ball with a 3 inch radius at one end of the handle.
Create a new layer and add a ball with a 6 inch radius to the other end of the handle. In the Numeric dialog box select tessellation and 3 segments.
The Head

- To make the spikes for the head of the mace select the Spikey tool under the Multiply tab.
The Head

- The Spikey tool will create spikes on the head of the mace. Adjust the spikes to the desired length.
Texturing

- For texturing, the Stainless steel Lightwave preset works well for the head of the mace. In this example I began with the presets and increased the bump map to make the mace look more worn.
Texturing

- For the handle I used the copper preset. Again I increased the bump map to make the mace look older.
Texturing

- For the ball on the end, I used the brass preset and again increased the bump map to about 70%.
Rendering

- Save your object and load it into Layout. The mace should look like this when it is rendered.
