

# Downloading Book Chapters

1. Use your PC to select the Book Programs link at this web site
2. Download all files to your PC by clicking on `usp_all.tar.Z` link at the book web site. Note that for some stupid reason known only to the creators of the book website, the file will be saved as `usp_all.tar.tar` unless you change the second tar to a capital Z or `usp_all.tar.Z`
3. Use telnet to upload `usp_all.tar.Z` to a `csci640` directory that you created on `tiglon`.
4. Once `usp_all.tar.Z` is located in your `csci640` directory, type the following at the `$` prompt to unzip the file:
5. `$ gunzip usp_all.tar.Z`
6. Type the following at the `$` prompt to un-tar the file:
7. `$ tar -xvf usp_all.tar`
8. All chapter files will be uncompressed and located in your directory
9. Change the compiler in each makefile from `cc` to `gcc`
